Bug #	Description of Bug (be specific About what is not working)	Location of Bug (file, class, method, etc)	Steps to Recreate Bug and/or Test Case #	Root Cause Analysis Notes
1	The order in which the ballots are processed in the STV Election affects the outcome. This means that the same elections run with shuffle turned on may result in varying outcomes.	STVElection.run() method	1. Start program. 2. Input seat number, number of ballot files, file names 3. Choose STV election 4. Turn on shuffle 5. Repeat process several times. 6. See that you may get varying election outcomes.	The root cause is that when a tie occurs when eliminating a candidate, the election process breaks the tie by eliminating the candidate who received their first vote the latest. This follows what's in the initial requirements document; however, it causes the algorithm to give varying outcomes while running the same election.
